# Offices

Offices represent an organisation's long-term commitment to a location and its people.

The challenge is designing an IT infrastructure that can sustain a long office lease but economically support several generations of IT and audio visual equipment.

As a vendor independent IT and audio visual consultancy, we help our clients invest in infrastructure and systems that provide both a platform for the long term and deliver measurable benefits such as improved space utilisation and staff productivity.

We are constantly reviewing the impact of technology trends on workplace design such as mobility, collaboration and smart buildings.

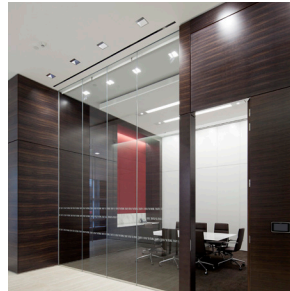

We design intuitive collaborative audio visual systems that help our clients' people connect, create and solve challenges.

We create technology spaces where our clients can engage with their people and own clients.

We have delivered robust IT and audio visual systems in headquarters, regional offices, campuses, training centres and trading floors, which are used daily across the world.

## Latham and Watkins

### London, UK

As well as IT and audio visual Cundall also provided building services, structural and fire engineering, acoustics and lighting design

**Client** Latham & Watkins  
**Architect** Gensler
