

One Planet Services

If you are looking for an approach to plan, deliver, communicate and mainstream sustainable development, the One Planet process can be a pathway to meet your needs.

One Planet Living is a Bioregional initiative. It is unlike formal prescriptive, tick box, certification systems, as it is flexible in implementation, and much wider in scope. Draws on the expertise of the design team and ultimately Bioregional if endorsement is required.

As the world's first consultant to have achieved the One Planet Company endorsement, we can use our own experiences and expertise to develop long term goals and strategies to guide you through this journey.

Our approach is collaborative, it will involve a team who will give practical advice, leading everyone to take the next step to sustainability and facilitate ideas from all.

Why Cundall?

For many years Cundall has been the assessor of a number of certification tools including: BREEAM, LEED, Green star, CEEQUAL, to name a few. While beneficial, each system has its limitations both in terms of scope and rigidity. The One Planet system provides a

framework for what is best in each of these certification processes, while being flexible enough to incorporate much wider issues.

We understand how to design and construct within the limits of one planet and also how to run a business within the principles of One Planet Living. We are the only company to have a team of trained One Planet sustainability consultants.

Our One Planet Service Offerings

Cundall have three One Planet service offerings:

1. One Planet Communities

Reducing our impact and increasing social cohesion.

2. One Planet Companies

Creating impact beyond your own operations.

3. One Planet Councils

Recognising sustainable and responsible government.

In all our One Planet services we use the empirical analysis of ecological footprint lifecycle water calculations and embodied resources as well as the One Planet Living framework to combine the transparency of data with the commitment to targets of One Planet Living.

Impact of One Planet endorsement

In a recent staff survey the majority of staff agreed that our One Planet endorsement had:

- Improved Cundall's brand.
- Helped Cundall win more work.
- Changed their thoughts on sustainability.

Long term targets:

-  Health and happiness
-  Equity and local economy
-  Culture and community
-  Land and nature
-  Sustainable water
-  Local and sustainable food
-  Travel and transport
-  Materials and products
-  Zero waste
-  Zero carbon energy

One Planet Living is a global initiative based on 10 principles of sustainability developed by BioRegional and WWF.

One Planet Communities

Communities and community facilities are assessed using evidence based calculations of ecological footprint and embodied resources such as carbon, energy and water.

Our approach to One Planet projects starts with setting the benchmark for what the community would consume if we were to all live within the means of one planet. We have undertaken this calculation for most community types and can provide industry related One Planet benchmarks. Where buildings are unique we can determine custom benchmarks in order to track any improvements made.

Once the benchmark is set, we work within the design and/or operations team to facilitate an improvement strategy that covers the ecological footprint and embodied resources associated with the operation of the community and its residents and visitors.

Contact us to find out about how Cundall can help you, your business, your community and your next project live within one planet.

One Planet Companies

Using our own experiences with gaining endorsement from Bioregional we have developed a tool kit for three levels of commitment. The three levels of commitment range from the first level which uses the One Planet Living principles to guide sustainability within your organisation through education, training and change management to the third level where we assist your company to obtain official endorsement from Bioregional.

The toolkit provides a turnkey solution to achieving One Planet endorsement and includes education and training, processes and policies to implement One Planet Living and full measurement and tracking systems for reporting back to Bioregional.

Strategies for ongoing transparency, accountability will be developed in conjunction with your team.

One Planet Council

One Planet Councils recognises environmental and socially sustainable approaches to local government.

Councils can play a critical role in helping their citizens reduce their ecological impact to a sustainable level. We will lead a benchmarking process to assess a Council's current achievement against the 10 One Planet Living principles, and develop a One Planet Action Plan to charter future progress and assist in benchmarking both the Council's operations and the impact on the wider community.
