

Abstract

World Green Building Week: 17th September 2013

Green Buildings 2020 – Capturing the Global Perspective

250 people, 16 offices, 10 countries, 1 event

In this interactive workshop held during World Green Building Week, guest will be asked to consider the drivers of sustainable design. First they will be asked what has driven sustainable building design in the last ten years? They will then be asked to consider what will drive sustainable building design in 2020? This will be followed by a group exercise where the workshop together prioritise the top 10 drivers from least to most important.

This unique event will be ran across the globe in various Cundall office locations. This will allow different global perspectives to be captured and compared. Participants will leave with an understanding of the drivers for sustainability, they will be involved in open discussions with various stake holders within the construction industry.

All attendees will be sent a summary report of all the results and commentary on the global trends and differences after the event.

This event which will be part of World Green Building Week. It encourages all participants to consider all aspects of sustainability, following the theme of Greener Buildings, Better Places, Healthier People.

Speaker Profile- Steven Lee Managing Director, Cundall Shanghai

Steven established Cundall Engineering Design Consulting (Shanghai) Co Ltd in 2007 and has been head of its business and operation since. A mechanical engineer by background, Steven has over 28 years of experience in building mechanical and electrical design consultancy in Asia Pacific region including countries like New Zealand, Australia, Singapore & South East Asia region and China. Steven has led and completed many significant projects in these countries. Steven believes sustainability is an integral part of overall building design and environmental considerations should be part of the overall focus in every building project.

Speaker Profile- David Nguy Senior ESD Engineer, Cundall Shanghai

A passionate Environmentally Sustainable Design (ESD) practitioner with over six years' experience, David possesses a rare combination of both technical ability and social prowess necessary to allow an otherwise complicated situation to become an enjoyable experience. The work he produces is top notch and the solutions he offers are based on significant experience. With extensive experience in the areas of environmental simulations and environmental rating schemes, David's key strengths lie within his ability to maintain a logical thought process whilst also applying lateral thinking which push the boundaries of 'the box'
